LUCAS OLIVEIRA DE AMORIM

Full Stack Software Engineer | Browser Automation | RPA

Patos de Minas, Brazil | Open to relocation

+55 34 99212-9901 | lucasrazebra@gmail.com | lucasdevbr.com | github.com/Lucas-Jav | linkedin.com/in/oliveiradilucas

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years of professional experience building browser automation, RPA systems, APIs, and responsive web products for healthcare, veterinary procurement, e-commerce, and media. Advanced in TypeScript, JavaScript, Node.js, React, PHP/Laravel, Playwright, AWS, and Docker. Promoted from Junior Developer to Tech Lead in 16 months, delivered 30+ production RPAs, and currently develops resilient automation across 10+ supplier portals for a US veterinary technology company. Experienced in distributed remote teams, technical leadership, production incident triage, and performance optimisation.

CORE SKILLS

Languages: TypeScript, JavaScript, PHP, SQL, HTML5, CSS3, XML
Frontend: React, Next.js, Vue.js, React Native, Vite, Tailwind CSS, responsive design, accessibility, WCAG
Backend & Automation: Node.js, Laravel, REST APIs, Playwright, browser automation, RPA, XPath, web scraping, cron jobs, webhooks, n8n
Data & Cloud: PostgreSQL, MySQL, MongoDB, Supabase, Redis, AWS (EC2, S3, Amplify), Docker
Engineering: Git, GitHub, testing, debugging, observability, SEO, performance optimisation, technical documentation, code review, Agile delivery

PROFESSIONAL EXPERIENCE

Highfive Vet | Web Automation Developer (Software Engineer) | Remote | Mar 2026 - Present

- Build and maintain TypeScript, Node.js, and Playwright automations for catalogue synchronisation, price and stock updates, purchase orders, order history, invoices, and tracking across 10+ US veterinary supplier portals.
- Design resilient browser workflows with authentication and session management, retries, timeout controls, partial-failure handling, browser infrastructure, and robust recovery from portal restrictions.
- Integrate automated workflows with internal APIs and event-driven jobs using Inngest, improving reliability and reducing manual procurement operations.
- Investigate production failures, identify root causes from execution data and logs, and convert findings into engineering fixes and operational safeguards.
- Collaborate in English with a distributed product and engineering team.

Leadtax | Tech Lead / Full Stack Developer | Remote, Brazil | Jan 2024 - Mar 2026

Career progression: Junior Front-End Developer -> Mid-Level Full Stack Developer -> Tech Lead

- Promoted twice within 16 months after taking ownership of complex healthcare automation and portal development.
- Developed 30+ production RPAs in PHP and Laravel for hospital authorisations, billing, reconciliation, denial appeals, and financial workflows.
- Built XPath-based web automation and XML/TISS processing, including document generation, file handling, validation, and integrations with healthcare systems.
- Delivered backend features, CRUD modules, business rules, REST integrations, and responsive React interfaces; deployed services using AWS Amplify, EC2, and S3.
- Led task allocation, technical analysis, code reviews, developer support, documentation, and delivery planning for a remote engineering team.

ADDITIONAL EXPERIENCE

Freelance Full Stack Developer & Technology Consultant | Remote | Dec 2022 - Feb 2026

Selected clients: Patos Hoje, Pecinha Tec, Group Global Samsung, and Plan Touch

- Built and maintained WordPress, Vue.js, Node.js, TypeScript, and Supabase solutions for e-commerce, news, customer service, and operational automation.
- Created product catalogue and stock synchronisation bots, automated WhatsApp group publishing, API-based lead distribution, scheduled workflows, and n8n integrations.
- Developed SEO-friendly, responsive features including dynamic job listings, short-video experiences, automated social media banners, and YouTube content ingestion.
- Improved performance, security, checkout UX, shipping integration, and product data quality; achieved PageSpeed and Lighthouse performance scores of up to 95+ on optimised pages.
- Delivered responsive PWA interfaces from Figma designs and performed end-to-end testing across devices.

Supliu Tecnologia | Web & Mobile Developer | Remote, Brazil | Aug 2023 - Jan 2024

- Built React and React Native interfaces for fiscal software and a hybrid SaaS e-commerce platform.
- Implemented dynamic forms, filters, navigation flows, product and customer modules, plan rules, and API integrations from Figma designs.
- Collaborated with product and engineering teams to translate tax-domain rules into usable software workflows.

SELECTED PROJECT

Dice Saga | AI-powered browser strategy game | React, TypeScript, Vite

- Implemented Monte Carlo Search and a neural network with 47 features and 3.5 million training steps without external AI libraries.
- Reduced the initial JavaScript bundle by 37%, improved Lighthouse performance from 59 to 90+, and delivered four languages, WCAG accessibility, and technical SEO.
